

YASH DUDEJA

Machine Learning Engineer | Generative AI | LLM Systems

- Machine Learning Engineer with 3+ years of experience building and deploying production-grade AI systems. Expertise in LLM-based architectures, RAG pipelines, and scalable ML services using PyTorch, Transformers, FastAPI, and vector databases. Strong focus on model evaluation, system reliability, and enterprise deployment.

WORK EXPERIENCE

Millipixels Interactive LLP

Feb 2025 - Present

Machine Learning Engineer

- Designed and deployed production-grade LLM-based systems using PyTorch and Transformers.
- Built RAG pipelines with vector databases (Qdrant) and FastAPI-based microservices.
- Implemented evaluation and monitoring strategies for model performance and reliability.
- Deployed ML services in containerized environments using Docker with CI/CD workflows.

Snapwork

Jun 2024 - July 2024

Data Scientist

- Collaborated with HDFC's data science team to automate financial document processing using OCR + NLP (RoBERTa), reducing manual effort by 65%.

Capgemini

2021 - 2023

Cloud Developer

- Delivered two successful migration projects (WebMethods IS & MWS) improving deployment efficiency by 25%.
- Collaborated across teams to enhance cloud integration and system performance.

PROJECTS

Intelligent Document Summarization & Compliance Checker

- Architected and deployed an LLM-based compliance validation system using RAG and vector search, reducing manual review time by 60%.
- Automated extraction and chunking of text from PDFs and scanned files, storing metadata in PostgreSQL and modeling inter-document relationships in Neo4j. Integrated Large Language Models (LLMs) with Qdrant-based retrieval.
- Ensured data privacy and model reliability in enterprise AI deployments.

ATS (AI-Powered Hiring Platform)

- Built an end-to-end intelligent ATS system using FastMCP, supporting resume parsing, job ingestion, and candidate ranking at scale.
- Designed a multi-factor scoring engine (skills, experience, stability, semantic match, education) for candidate-job matching, improving shortlisting accuracy and reducing recruiter effort.
- Integrated automated voice-based candidate outreach and interview scheduling using Twilio APIs, with retry logic and real-time booking workflows.

Agentic AI for IT Helpdesk Automation

- Developed an LLM-driven multi-agent orchestration system using LangChain + FastAPI, automating ticket triage and reducing low-priority workload by 40%.
- Built dynamic tool-calling and routing architecture, enabling agents to interact with APIs and internal services in real time.
- Improved issue resolution efficiency by ~30% through context-aware decision making and automated workflows.
